UCF
College of Engineering and Computer Science

EDUCATION:

Major: *Computer Engineering B.S.*
Minor: *Mathematics* — **Expected Graduation:** May, 2020
University of Central Florida — **Overall GPA:** 3.00

PROJECTS: *Fall 2016 – Fall 2019*

- **Lot Tracing Software**
  - I developed a custom program for tracking and generating lot information throughout the product life cycle in JavaFX, CSS, FXML, and MySQL.
  - Developed a user interface that is compliant with Google's 'Material Design' Specification
  - Created a data access layer that connected to a complete MySQL database that I designed and wrote to store all of the application's data
- **Autonomous RC Car**
  - Built a convolutional neural network to classify different road signs, in real time, using Keras and TensorFlow
  - Developed a JavaFX user interface for viewing a live feed through the car's cameras as well as sending commands over WIFI using UDP server.
  - Worked in a team of 4 utilizing Agile and Scrum methodologies throughout the project.
- **Employee Time Tracking Software**
  - Developed a desktop 'Sign In' application for employees and contractors to track work time for payroll and employee tasks.
  - Implemented a concurrent, automated cloud backup service as well as functionality to email personal excel sheets to each employee.
  - Built a custom .XLS and .XLSX editor for fast and portable data IO
- **IREC Competition (As member of SEDS: Students for the Exploration & Development of Space) at UCF**
  - 2018-2019 Ground Support Equipment Team lead for the IREC project. Build a 14ft rocket powered by a hybrid motor using nitrous oxide and ABS plastic as a propellent.
  - Designed and built infrastructure for remote launching/fueling the rocket from over a mile away using WIFI. Developed an application for receiving and sending commands / live telemetry with a full GUI.
  - 2017 Systems Engineer for the IREC project where I worked on a team of 40 to organize and manage the project on a macro scale.

SKILLS:

- **Programming Languages**
  - Java, JavaFX, MySQL, C, C++, Python, GO, MIPS Assembly, HTML, CSS, FXML
- **Applications & API's**
  IntelliJ IDEA, Xcode, Android Studio, Keras, TensorFlow, Microsoft Office, MySQL Workbench, Git, VMWare, Apache POI, Java Mail,
  - Jfeonix, Font Awesome, JDBC (Java Database Connector), Scene Builder.
- **Operating Systems:**
  - Mac OS, Windows, Linux (Ubuntu & Elementary)

WORK EXPERIENCE:

- *2016-2017* All In Stiches, Warehouse Mgr.
- *2017-2018* Heads Up Industries, Software Development
- *2018-2019* Astrodynamics & Robotics Laboratory (Software Development)

EXTRACURRICULAR ACTIVITY:

- **Member, Students for the Exploration and Development of Space** ***2017-Present***
- **Member, HackUCF** ***2016-Present***
- **Member, Intercollegiate Rocket Engineering Competition** ***2017-Present***
- **Member, Tech Knights** ***2016-Present***
